

PRE-MIXED
STANDARD
COLOURS

2024 Edition

ColorSpray by RegaLead is one of the leading brands in the coating industry supplying into the Fenestration sector.

With solutions for both factory/booth application and onsite spraying, ColorSpray has become the go-to solution for many of the UK's largest composite door fabricators, trade sprayers and in-house finishing shops.

As we are primarily suppliers into the Window and Door industry, we have developed this range of 'standard' colours that are held in stock and are fully verified colour matches. Covering the most popular RAL shades, industry standard composite door colours, PVC profile matches and our own range of DoorColour, all colours are available on short lead times in a variety of coating types plus in our 1K or 2K aerosol formats.

Quality Control

We are constantly updating our formulations to ensure highly accurate matches for all our standard colours, both to original colour and from batch to batch. Using DataColour Spectrophotometers to measure both 'drawdown' and sprayed-out samples from every batch produced, ColorSpray standard colours are manufactured with an industry leading tolerance of just 1 ΔE .

Sheen Levels

Most of our coating systems are available in a range of sheens and throughout this colour guide, we have indicated the recommended sheen level. Colour shades can look different dependant on sheen level, particularly with dark colours. Our standard sheen levels are:

Semi Matt	20 Sheen	18-22 Gloss Units
Satin	50 Sheen	28-33 Gloss Units
Semi Gloss	60 Sheen	40-45 Gloss Units

Gloss units are measured at 60° angle

GRP 2K

Our market leading 2K PU system which is used by many of the UK's largest composite door producers. Designed to offer high levels of coverage, low sag properties and be exceptionally hard wearing. Primarily developed for use on GRP doors but is also suitable for use on foiled and non-foiled PVC.

PVC 2K

Designed to create an ultra smooth, hard wearing finish PVC 2K is also our fastest drying product with touch dry time as low as 10 minutes. Ideal for painting smooth PVC where finish is paramount.

FENECOAT WB

Our water-based, non-isocyanate coating solution for on-site application. With the unique adhesion promoter, FeneCoat WB gives excellent adhesion to both PVCu and GRP composite doors and can be applied at temperatures as low as 6°C. FeneCoat WB can be applied by spray or brush/roller combination.

OMNICOAT S 1K

Our solvented single pack option is a non-isocyanate formulation, primarily used for on-site applications where control of isocyanate exposure is difficult. OmniCoat S 1K is designed to give a smooth finish and can be applied to foiled and non-foiled PVC and pre-painted GRP composite doors with suitable preparation.

MULTI-USE AEROSOL

OMNICOAT S 1K

Our hugely popular 1K product is now available in a handy to use aerosol format. Ideal for touch ups and repairs and for customers looking to spray trims and accessories on site without the need for a professional spray gun set up.

SINGLE-USE AEROSOL

GRP 2K

A unique 2K aerosol version of our flagship GRP product. The dual canister can contains separate base/colour and hardener. When the hardener is activated and the parts combine it gives the same exceptional hard wearing properties as the standard spray product.

Aerosol Application

ColorSpray pride ourselves on the accuracy of colour matches. This, with the availability of Renolit Foil colours and popular colours from the Window & Door Industry, make our aerosols the perfect tool for completing repairs, touch-ups, colour-matching trims and accessories at short notice.

OmniCoat S 1K Aerosol is a great tool for window fitters and fabricators ensuring a quick drying, accurate and hard-wearing finish to general building plastics. It's multi-use and has a shelf life of 12 months.

GRP 2K Aerosol is a fully cross-linking paint with a hardener to ensure incredible durable finish that is more suitable for high traffic areas such as composite doors and window/door sills.

Please scan the QR code to find a helpful video on the use of our aerosols.

What Can I Paint?

ColorSpray Aerosols are ideal for flat or foiled PVC window trims, architraves, cill end caps, trickle vents, GRP weather bars and other plastics accessories.

Surfaces need to be clean, dry and free from any oil or silicon based contaminants. A simple PVC cleaner solution will suffice in cleaning these materials.

How Do I Apply the Paint?

The aerosols are applied in three stages - a very light dusting across the substrate called a 'dust coat'. Allow this to dry slightly to a powdery finish (1-2 minutes) before applying a full 'wet coat' - leaving this to flash-off for 2-3 minutes before applying a finishing coat - ensuring a consistent, durable and smooth finish.

What About the 2K Aerosol?

The 2-pack Aerosol is 'single-use' and includes a hardener pouch that will burst inside the can during the set up process. Please refer to the can label for clear instructions. Only start the mixing process when you're ready to begin and only use in very well ventilated areas.
